

TMD NOISE GENERATOR FOR TINNITUS MANAGEMENT

The Sensorcom TMD (Tinnitus Management Device) noise generator delivers smooth, time stable, wide band noise for maximum sound enrichment and comfort. The noise generator is small and comfortable and can be used for extended periods, ideally, all your waking hours and is available in three different output levels to match the severity of your condition: 60db,70db,and 80dB. Typically 60dB is sufficient for the majority of people the; 60dB model creating less noise and the 80dB creating more. The diminutive size and profile of the new TMD noise generator makes it one of the smallest devices of its kind in the world and a truly effective non-invasive. The TMD noise generator will help you manage and be at peace with your tinnitus and if used in conjunction with (TRT) Tinnitus Retraining Therapy, in many cases the tinnitus can be reduced to a tolerable level and in some cases can even fall below your threshold of hearing.

This in the canal noise generator can be used in either ear and does not need personal fitting. The A10 size battery lasts approximately 120 hours reducing the running costs of managing your tinnitus. Each instrument is supplied with a comfort sleeve which makes the instrument feel more secure in the ear. Different sizes are available in pack of 3.

Using the Noise Generator

Make sure you have a fresh battery fitted and that the battery drawer is secure, gently insert the noise generator into the meatus (ear canal) using the comfort sleeve if necessary to ensure a good fit. Using index finger rotate the volume control until the noise is just below the level of your tinnitus. The noise generator should be used for a minimum of 6 hours a day. Nighttime use is encouraged as this is when tinnitus can be most intrusive.
